

Computer Science graduate building production-oriented web and systems projects, including a React/Next.js + Shopify e-commerce platform for a real beauty supply business and a C-based HTTP server focused on Unix I/O and networking fundamentals.

EDUCATION

Mercy University, Dobbs Ferry, NY

May 2025

Bachelor of Science in Computer Science

- Relevant Coursework: Data Structures, Algorithms, Database Systems, Software Engineering, Computer Architecture, Computer Networks, Linux Administration, Artificial Intelligence

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, C, SQL, Java, C#, Python
- Backend: Node.js, Next.js, REST APIs, Spring Boot, ASP.NET, Django, Supabase
- Databases: PostgreSQL, MySQL, SQLite, Prisma, SQL, PL/pgSQL, Supabase RLS
- Frontend: React, React Native, Tailwind CSS, Shadcn UI
- Testing: Vitest, Unit Testing, Mocked Dependencies
- Tools & Platforms: Git, Linux, Shopify, Docker

EXPERIENCE

Today Beauty Supply — New York, NY

Technical Operator / E-commerce & Systems Developer

May 2025 – Present

- Supporting e-commerce modernization for a brick-and-mortar retail business, including Shopify storefront setup, product organization, catalog cleanup, and operational workflows.
- Built and deployed a custom e-commerce prototype to validate catalog, cart, authentication, checkout, and inventory workflows before the business chose Shopify for production.
- Assisted Lightspeed-to-Shopify migration by cleaning, restructuring, and validating order/product data with psql, checking categories, pricing, inventory fields, and import readiness.
- Evaluated custom software against Shopify, identifying tradeoffs around checkout reliability, admin usability, inventory management, store pickup, and speed-to-market for a nontechnical retail team.

New York Edge — New York, NY

Extended Day Activity Instructor / STEM specialist

March 2024 - February 2025

- Developed and delivered computer science lessons for grade-school students covering programming fundamentals, conditional logic, loops, DRY principles, and basic cybersecurity concepts.

PROJECTS

C HTTP Server — Systems Programming Project

July 2026 - In Progress

- Building an HTTP server in C while studying CSAPP, focusing on Unix file descriptors, socket programming, request parsing, and robust I/O.
- Implementing core server behavior including accepting TCP connections, parsing HTTP requests, serving responses, and handling system-level errors.

Today Beauty Supply E-Commerce Prototype — Full-Stack Web Application

Full-Stack Developer

July 2025 – June 2026

- Built and deployed a full-stack e-commerce prototype using Next.js, TypeScript, Supabase/PostgreSQL, Stripe Checkout, Tailwind CSS, and Vercel.
- Implemented database-backed product browsing, product detail pages, hierarchical categories, cart management, authentication-aware UI states, inventory visibility, SKU/barcode metadata, and order confirmation.
- Designed PostgreSQL schema and data-access logic using multi-level categories, JSONB metadata, indexes, Row Level Security policies, RPC functions, and SQL/PLpgSQL procedures.

Visa Recommendation App - Mobile Application

Backend Developer (School Project)

January 2024 - May 2024

- Developed a Spring Boot REST API for visa eligibility recommendations, using Spring Data JPA and MySQL to support rule-based suggestion logic.
- Designed and managed a relational MySQL schema seeded with 11 visa types, structured for future expansion of visa categories and user data.
